PRACTICAL - 7

Implementation of Making Change Problem using Dynamic Programming

Aim of the Practical:

To find the minimum number of coins required to make a target amount using dynamic programming and analyze its complexity.

Algorithm:

1. Initialize dp[0] = 0 and dp[1...A] = ∞.
2. For each amount x from 1 to A, try every coin denomination.
3. If coin ≤ x and dp[x-coin] is finite, update dp[x] = min(dp[x], dp[x-coin] + 1).
4. Return dp[A], or -1 if it is still infinite.

Program:

```
#include <iostream>
#include <vector>
#include <climits>
#include <algorithm>
using namespace std;
int minCoins(const vector<int>& coins, int amount) {
    vector<int> dp(amount + 1, INT_MAX);
    dp[0] = 0;
    for (int x = 1; x <= amount; x++) {
        for (int coin : coins) {
            if (coin <= x && dp[x - coin] != INT_MAX) {
                dp[x] = min(dp[x], dp[x - coin] + 1);
            }
        }
    }
    return dp[amount] == INT_MAX ? -1 : dp[amount];
}
int main() {
    vector<int> coins = {1, 3, 4};
    int amount = 6;
    cout << minCoins(coins, amount);
}
```

Output:

```
2
```

Step-by-Step DP for coins {1,3,4}, amount 6:

- dp[0] = 0
- dp[1] = 1 using {1}
- dp[2] = 2 using {1,1}
- dp[3] = 1 using {3}
- dp[4] = 1 using {4}
- dp[5] = 2 using {4,1}
- dp[6] = 2 using {3,3}

Time Analysis:

Derivation of Time Complexity:

Let A be the target amount and m be the number of coin denominations.

The outer loop runs once for each amount from 1 to A.

Outer-loop iterations = A

For every amount, the algorithm checks all m coin denominations.

Inner-loop iterations per amount = m

Name: SOGALA Harsha Vardhan **Enrollment No: 92400118302**

Each inner-loop operation performs a constant-time comparison and possible update.

$$T(A,m) = A \cdot m \cdot O(1)$$

$$T(A,m) = \Theta(Am)$$

The dp array contains A + 1 entries.

$$S(A) = \Theta(A)$$

Final Time Analysis:

- Time Complexity: Θ(Am).
- Space Complexity: Θ(A).

Result:

The Making Change problem was solved successfully using dynamic programming, and the minimum number of coins for amount 6 is 2.
